PROFESSIONAL SUMMARY

Software Engineer and Odoo Developer building business systems across student, secretary, visitor, and legal case workflows. Develops custom Odoo modules, dashboard and API integrations, and a Next.js, React, PostgreSQL, TypeScript, Tailwind CSS, and Prisma web application that supports end-to-end product delivery. Turns operational needs into usable software with clear data flow and admin-friendly interfaces.

TECHNICAL SKILLS

Technical Skills: Python, JavaScript, React, Git, TypeScript, Tailwind CSS, Prisma ORM, Zustand, Zod

Web Application Development: Next.js, Odoo development, API integration, Full stack development, Laravel

Engineering Practices: Unit testing, Authentication & authorization, Responsive design, CI/CD pipelines, Deployment workflows

EXPERIENCE

Software Engineer and Odoo Developer

Aug 2024 – Present

Laplace Software Company (Saudi Arabia)

Remote

- Joined a Saudi-based software company as an Odoo Developer, starting with hands-on training in Odoo development, Python, PostgreSQL, XML, and ORM.
- Built the Student Management System (SMS) during the training period, then transitioned to contributing to real-world Odoo projects across multiple business domains.
- Developed and maintained custom Odoo solutions for student, secretary, visitor, and legal case management workflows.
- Expanded into full-stack development by learning React, Next.js, and Node.js, and built a practical food ordering application using modern web technologies.
- Contributed to the Samtia B2B E-Commerce Platform, working across Odoo and Next.js and integrating services through REST APIs and WebSockets.
- Continuously expanded technical expertise through real-world development, system integrations, debugging, and production-oriented workflows.

Back End (Internship)

July 2023 – Aug 2023

ITI

Online Training

- Resolved software bugs and implemented feature improvements while contributing to HTML, CSS, JavaScript, PHP, and Laravel development.
- Built backend features for a restaurant management system using PHP, Laravel, and MySQL.
- Developed front-end pages with HTML, CSS, and JavaScript to support project interfaces.
- Wrote and maintained SQL queries in MySQL to support data storage and retrieval.
- Used Git to track changes and coordinate code updates during internship work.
- Completed online training to strengthen backend development skills and practical project readiness.

EDUCATION

Al-Azhar University

Bachelor of Engineering in Systems and Computers

Egypt, Cairo

Sep. 2019 – May 2024

PROJECTS

Samtia B2B E-Commerce Platform(Laplace)

- Developed a headless B2B e-commerce platform using Odoo 19 and Next.js, enabling product catalog management, customer-specific pricing, RFQs, quotations, orders, product requests, client and portal-user management, authentication with OTP/password reset, real-time chat, notifications, and role-based access control. Integrated the system through REST APIs and WebSockets with PostgreSQL, Docker, Odoo.sh, and Cloudflare deployments.
- Technologies: Odoo 19, Python, PostgreSQL, REST APIs, Next.js, TypeScript, WebSockets.

QuickDine – Multi-Restaurant Table Booking Platform

[Github](#) | [Demo](#)

- Developed a full-stack multi-restaurant table booking platform with dedicated workflows for Customers, Restaurant Owners, and Admins.

- Implemented real-time table availability, reservation management, JWT authentication, and role-based access control.
- Built RESTful APIs and MongoDB data models using Node.js, Express.js, and Mongoose, with Cloudinary for restaurant image uploads.
- Developed responsive dashboards and search/filter functionality using React 19, TypeScript, Vite, and Tailwind CSS.
- Technologies: React 19, TypeScript, Vite, Tailwind CSS, Node.js, Express.js, MongoDB, Mongoose, JWT, Cloudinary.

Access Management & Visitor Management Platform (Laplace)

- Developed an Odoo 18 enterprise platform for visitor management, physical access control, employee attendance, and workforce operations, including visitor invitations, QR-code access, biometric credentials, doors, schedules, devices, access groups, attendance, shifts, timesheets, leave management, and reporting.
- Integrated the platform with Suprema BioStar 2 via REST APIs for user, fingerprint, face, card, device, access-control, and event synchronization. Implemented mobile attendance APIs, RBAC, LDAP/SAML authentication, email and WhatsApp notifications, and Docker-based deployment.
- Technologies: Odoo 18, Python, PostgreSQL, REST APIs, JavaScript, XML, OWL, BioStar 2

Executive Secretary & Visit Management System (Laplace)

- Developed an Odoo-based platform for executive secretary operations, covering contacts, appointment requests, appointments, invitations, visits, memos, alerts, attachments, and visitor admission workflows. Implemented role-based access control, multi-company support, custom OWL dashboards, Hijri/Gregorian date handling, and REST API integration with an iPad application.
- Technologies: Odoo, Python, PostgreSQL, XML, JavaScript, OWL, REST APIs, JSON.

IoT Audio Flow & Sound Device Management System (Laplace)

- Developed an Odoo and FastAPI-based IoT platform for centralized management of distributed sound devices, supporting tone uploads, scheduled audio playback, device groups, remote configuration, scheduler control, health monitoring, and command-queue tracking. Implemented asynchronous broadcast operations with per-device success and failure reporting.
- Technologies: Odoo, Python, PostgreSQL, FastAPI, REST APIs, OWL, JavaScript.

Legal Case & Financial Management System (Laplace)

- Developed an Odoo 18 platform for managing legal customers, cases, court sessions, lawyers, opponents, payments, expenses, attachments, and payment methods. Implemented automated financial calculations for paid, remaining, and profit amounts, customer-level summaries, role-based access control, multi-company support, Arabic localization, and an OWL dashboard.
- Technologies: Odoo 18, Python, PostgreSQL, XML, JavaScript, OWL.

Student Management System (Laplace)

[Github](#)

- Developed an Odoo-based platform for managing students, courses, enrollments, grades, attendance, emergency contacts, and academic reports. Implemented enrollment workflows, automated absence generation, attendance-percentage calculations, student PDF reports, teacher notifications, an OWL dashboard, student portal, and REST APIs for student management.
- Technologies: Odoo, Python, PostgreSQL, XML, JavaScript, OWL, REST APIs, QWeb Reports.

Food Ordering App

[Github](#)

- Developed a modern, full-stack food ordering web application with multi-language support and responsive design.
- Implemented secure authentication and authorization using NextAuth.js, supporting user login and registration.
- Built locale-aware routing and dynamic translation logic for seamless internationalization (i18n).
- Created reusable UI components and forms with real-time validation and user feedback via toast notifications.
- Ensured accessibility and mobile-first responsiveness using Tailwind CSS and React best practices.
- Technologies: Next.js, React, TypeScript, PostgreSQL, Prisma, Tailwind CSS, NextAuth.js.

Ecommerce Laravel Project

[Github](#)

- Laravel multi Authentication Admin & User
- Card Payment
- Download / Print PDF File in laravel
- Make Search for Product
- Use Sweet Alert Message
- CRUD Operations
- Technologies: Laravel, PHP, MySQL, Blade, Bootstrap, SweetAlert.
